perplexity

Are there any cheat sheets or checklists for securing systems easily

Absolutely! Cheat sheets and checklists are the fastest way to get started with system security and hardening. Here are some of the **best, most practical cheat sheets and checklists** (with direct links) for both **Linux and Windows** systems:

General Security Hardening Checklists

- **CIS Benchmarks (Checklist PDFs for All OS)**
  - The industry standard for hardening checklists.
  - CIS Benchmarks Download Page (Free, requires sign-up)
  - Example: CIS Linux Checklist (PDF)
  - Example: CIS Windows Checklist (PDF)
- **SANS Institute Security Checklists**
  - Concise, actionable checklists for hardening and auditing.
  - SANS Security Checklists

Linux Hardening Cheat Sheets

- **Linux Security Checklist (Linuxize)**
  - Quick, practical steps for securing any Linux box.
  - Linuxize Hardening Checklist
- **Linux Hardening in 15 Steps (Red Hat Blog)**
  - Red Hat: 15 Steps to Secure Linux
- **Linux Hardening Cheat Sheet (Cheatography)**
  - Cheatography Linux Hardening Cheat Sheet (PDF)
- **OWASP Linux Security Hardening Cheat Sheet**
  - OWASP Linux Hardening Cheat Sheet

Windows Hardening Cheat Sheets

- **Windows Security Hardening Checklist (Comparitech)**
  - Comparitech Windows Security Checklist
- **Windows 10 Hardening Cheat Sheet (Cheatography)**
  - Cheatography Windows 10 Hardening Cheat Sheet (PDF)
- **Microsoft Security Compliance Toolkit**
  - Official Microsoft tools & templates for hardening.
  - Microsoft Security Compliance Toolkit

Quick Reference Security Cheat Sheets

- **OWASP Security Cheat Sheet Series**
  - Dozens of cheat sheets for everything from authentication to server hardening.
  - OWASP Cheat Sheet Series
- **Ultimate IT Security Checklist (UpGuard)**
  - UpGuard IT Security Checklist

Sample: Linux Hardening Quick Checklist

1. **Update your system:**
   `sudo apt update && sudo apt upgrade`
2. **Create a new non-root user:**
   `adduser username`
3. **Disable root SSH login:**
   Edit `/etc/ssh/sshd_config`: `PermitRootLogin no`
4. **Enable firewall (UFW):**
   `sudo ufw enable && sudo ufw default deny incoming`
5. **Install fail2ban:**
   `sudo apt install fail2ban`
6. **Check open ports:**
   `sudo ss -tuln`
7. **Disable unused services:**
   `sudo systemctl disable service-name`
8. **Set strong password policy:**
   Edit `/etc/login.defs`
9. **Regularly check for new users:**
   `cut -d: -f1 /etc/passwd`

10. **Audit with Lynis:**
    `sudo lynis audit system`

Sample: Windows Hardening Quick Checklist

1. **Enable Windows Firewall**
2. **Apply latest Windows Updates**
3. **Disable unnecessary services (e.g., Telnet, SMBv1)**
4. **Set strong password policies**
5. **Enable BitLocker (disk encryption)**
6. **Configure User Account Control (UAC)**
7. **Restrict RDP access**
8. **Use Windows Defender Antivirus**
9. **Regularly review user accounts**
10. **Apply Microsoft Security Baselines**
